

# Protect the children

## 1) Children are not at risk for COVID disease

Healthy children do not die of COVID-19. They typically have zero or extremely mild symptoms, and if they are sick, then can easily be treated with the same safe medication as adults. The miniscule number of cases reported are actually children who were hospitalized for other causes, who died from their underlying conditions.

## 2) Children *are* at risk for vaccine injuries

In contrast, many children have tragically already been disabled or fatally damaged by the COVID vaccine, passing away of heart attacks within a few days or weeks of the shot. An unacceptably high percentage of young people who are vaccinated for COVID get myocarditis, which leaves lifelong cardiac effects and has a 5-year mortality rate of 50%, according to the Mayo Clinic.

If your child suffers an adverse effect, you are on your own. The manufacturers are exempt from any legal liability under the National Childhood Vaccine Injury Act of 1986.

## 3) The vaccine is not effective against COVID transmission or infection

The vaccines, including Pfizer, are not approved for human use until the trials conclude in 2023. The testing period for children aged 5-11 lasted only two months. Your children are the trial subjects. From the FDA's own literature:

*The Pfizer-BioNTech COVID-19 Vaccine is an **unapproved** vaccine that may prevent COVID-19. There is **no FDA-approved** vaccine to prevent COVID-19. The FDA has authorized the **emergency use** of the Pfizer-BioNTech COVID-19 Vaccine to prevent COVID-19 in individuals 12 years of age and older under an Emergency Use Authorization (EUA). Serious and unexpected side effects may occur. Pfizer-BioNTech COVID-19 Vaccine is **still being studied in clinical trials**.*

- Children are more likely to die from COVID *after* being vaccinated: <https://theexpose.uk/2021/10/22/children-up-to-16-times-more-likely-to-die-with-covid-19-if-vaccinated/>
- Dr. Tess Lawrie shows that vaccines are not preventing COVID-19 deaths and are actually contributing to overall deaths and hospitalizations from all causes: <https://ukfreedomproject.org/resources/follow-up-letter-to-dr-june-raine-chief-executive-mhra/>
- The FDA had wild conflicts of interest that might explain why they approved the emergency use for children <https://truthcomestolight.com/malfesance-behind-the-fda-vax-ok-for-children/>

#### 16 year old Ernesto dies 5 days after COVID vax

"I consider it murder" -father of Ernesto Ramirez

#### Dad: My Son's School Made Him Get a COVID Vaccine, Now He Has a Heart Condition

A 17-year-old student, who recovered from COVID but was required to get the vaccine in order to attend school and play soccer, developed a heart condition soon after getting the Pfizer vaccine.

By Megan Redshaw

Over 17,000 deaths have been reported in the US alone from COVID vaccines, according to VAERS data at October 22, 2021. If the vaccines are not even safe for adults, why in the world would we give them to children, who are not even in any danger from the disease itself? By the time reports of deaths and disabilities in children 5-11 begin to come into the reporting system in the next two weeks, a staggering amount of damage will already have been done, and that does not even take account of whatever long-term effects these shots may have on our children's health. **THEY HAVE NOT BEEN LONG-TERM TESTED.**

837,593 Reports  
Through October 22, 2021

#### More Reasons Why Children And Young people Should Not Get the COVID Vaccines

Taken from the website pandata.org

- Medium and long-term safety data about the COVID-19 vaccines are still lacking. Children and young people have a remaining life expectancy of 55 to 80 years.
- Vaccination policies rely on expected benefits clearly outweighing the risk of adverse events from the vaccination. The risk-benefit analysis for the COVID-19 vaccines points to a high potential risk versus no benefit for children and young people.
- Transmission of SARS-CoV-2 from children to adults is minimal and adults in contact with children do not have higher COVID-19 mortality. It is unethical to put children and young people at risk to protect adults.
- **THERE IS THUS NO MEDICAL OR PUBLIC HEALTH CASE FOR THE MASS VACCINATION OF CHILDREN AND YOUNG PEOPLE**
