

# Do-It-Yourself Rocket Stove

This rocket stove can be built in minutes with 16 bricks (2 are half bricks). It uses a minimal amount of fuel (small sticks, twigs, leaves etc.) to cook full meals with efficient heat funneled directly up under the pan. It is also wind and "light rain" resistant.

**STEP 1:** Lay your brick base.

**STEP 2:** Add the 2nd level of bricks.

HALF BRICKS

**STEP 3:** Add the 3rd level bricks.

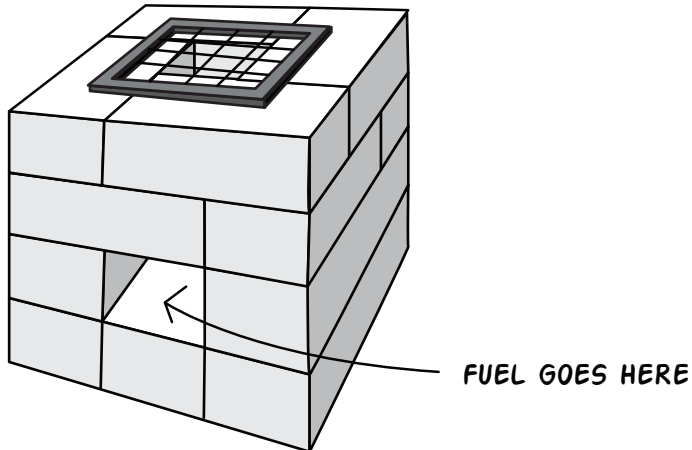

**STEP 4:** Add the top level of bricks.

## Do-It-Yourself Rocket Stove *(continued)*

**STEP 5:** Add a sturdy metal grate or screen to cover the hole for your cooking surface.

**STEP 6:** Add kindling, small sticks and twigs to the oven and light your fire for cooking. If you want a longer burn, use a bit harder wood and larger pieces. You can also use charcoal if available.
