

Pectasol For Inflammation

I was diagnosed with heavy inflammation following testing and GI mapping last summer. My herbalist recommended I take Pectasol.. I can honestly say I notice a difference so I wanted to share this with you. I don't sell it... I just love it and feel like it's a game changer!

Modified citrus pectin (MCP) (I used Pectasol), particularly when combined with alginates and other binders, is designed to help bind and eliminate toxins, including glyphosate and other agricultural pesticides from the body. While primarily known for heavy metal detoxification, specialized MCP formulations are marketed to remove glyphosate by binding it for safe excretion.

PectaSol (a specific form of modified citrus pectin) and related formulas (such as GlyphoDetox) are designed to help the body reduce and eliminate toxins, including glyphosate.

- Mechanism of Action: PectaSol is a modified citrus pectin that acts as a natural binder. Polyuronides in PectaSol bind to positively charged toxins, such as pesticides, and help eliminate them from the body.
- Targeted Formula: EcoNugenics offers a, "Detox Rescue Supplement Bundle" that includes PectaSol and "GlyphoDetox," a formula specifically marketed to help reduce glyphosate levels in the body.
- Clinical Evidence: According to a product spotlight from the manufacturer, a study indicated that a formula containing these ingredients resulted in a significant reduction of glyphosate levels in urine after 6 weeks.
- Additional Benefits: Beyond binding toxins, PectaSol helps to support a healthy gut wall and modulate the microbiome, which is often damaged by glyphosate exposure.
